

# THE BLUEPRINT

BROOKLYN TECHNICAL HIGH SCHOOL 29 FT. GREENE PLACE BROOKLYN, N. Y.

### www.BrooklynTechSurvivors.com

## Dedication

The vast changes in economic, social, political, and religious life during the Renaissance had their intellectual counterpart in the humanist movement. Humanism in the Renaissance derived its name from one of its most crucial concerns: its advocacy of a new educational curriculum which would emphasize a group of subjects known as the humanities. At the forefront of the humanist movement was Vittorino da Feltre, the noted European educator, whose ideas influenced European schools for hundreds of years.

Da Feltre believed that the traditional scholastic education, which prepared students for direct entry into the professions, was too narrow, too abstract, and too exclusively intellectual. These overly specialized disciplines failed to meet society's needs; and to this inadequacy in the traditional scholastic education he attributed numerous defects in the world around him. He attempted to rectify this shortcoming in European education by providing students with an education that involved the body and character as well as the mind, thereby preparing his students for the responsibilities of citizenship and social leadership. Da Feltre believed that a truly educated person should have a social consciousness and that he should feel a proper sense of duty toward man; de Feltre cherished an optimistic view of man's capacities.

Yet, the challenges of tomorrow cannot be met with optimism alone. Our educational program must consider the demands of our ever-changing society and evaluate its success in meeting these challenges. An education devoted to the humanities alone or to science and technology only is half an education. Mr. C. P. Snow has eloquently expressed the need for ending the dichotomy between the two cultures in our society. The tremendous advances in science and technology and the method of thinking that has proved so useful in these fields cannot be in conflict with the ideas and values developed in the humanities during the long course of human history.

In dedicating this yearbook to Mr. Auerbach, the Class of 1967 wishes to commend him for his efforts in educating the entire Technite. As Mr. Auerbach realizes, the true measure of an educated person is not to be found in the degree of specialization he is subjected to, but in the various ways he can employ his education in serving humanity.

#### Theme

Our souls, whose faculties can comprehend The wondrous architecture of the world: And measure every wandering planet's course, Still climbing after knowledge infinite, And always moving us the restless spheres, Until we reach the ripest fruit of all, That perfect bliss and sale felicity, The sweet fruition of an earthly crown.

In its original and narrowest definition, the Renaissance refers to a complex of literary and artistic movements following a revival of classical literature and art in Italy. However, the Renaissance was more than a conglomeration of social, political, and economic changes that had accompanied previous movements. A fundamental individualism, which manifested itself during this period, distinguished this era from previous ones.

This spirit of individualism and independent thought, this quest for truth and knedge was known as humanism, the essence of the Renaissance spirit. The humanists believed that an education should encompass body and character as well as mind for the ensuing responsibilities of citizenship and social leadership. Education became more than a stagnant process detached from the mainstream of government and sociaty; it became responsive to the needs of civilization.

The humanists represent a new kind of attitude toward human experience and the nature of human knowledge. Accustomed to the everchanging, concrete activities of city life, they found the rigid, closed systems of abstract thought, then typical of the schools, both useless and irrelevant. They sought to free education from the stilling atmosphere of restrictive dogmas and superstitions that had pervaded the Middle Ages.

The essential contribution of the Renaissance to the modern world is thus to be found not in its concern with antiquity, but in a new attitude of flexibility and openness to all possibilities of life. This is the true significance of the educational process. This is Tech's legacy to us, the realization that the horizons of knowledge extend beyond the classroom; that a high school education it not just a series of facts to be memorized, but our first confrontation with stimulating ideas of original thinkers.

The Blueprint is a testimonial to our endeavors, whether fruitful or not, to attain truth and knowledge. Just as there are histories of the Renaisance, the Blueprint is a history of our stay at Tech. It is a reminder of our quest for knowledge and of the obstacles that we faced and had to overcome. Hopefully, the Blueprint may serve as inspiration for us to tread the bright path of truth and not the dark path of specieus reasoning and hasty conjecture.

BOARD OF EDUCATION OF THE CITY OF NEW YORK BROOKLYN TECHNICAL HIGH SCHOOL TWENTY-NINE FORT GREENE PLACE, BROOKLYN, N.Y.11217 TELEPHONE: ULSTER 8-5150 ISIDOR AUERBACH, PRINCIPAL

June, 1967

Dear Seniors:

The years you have spent at Brooklyn Technical High School have in a very real sense been your "Renaissance". Literally, the term means a rebirth. If you would compare yourself, now that you are a graduate, with the boy who came to this school as a freshman, you would find many radical changes. These changes are the development and maturation of your own unique personality and abilities. The many technical courses and our college preparatory course offer a unique opportunity to every student to select his major interest. An intensive exploration of this major area provides each student with an early appraisal of his own career decisions. These differentiated courses of study, and our honor and advanced placement courses, enable each student to evaluate his interests and abilities realistically. I believe that a man is at his best when he is doing his best at what he can do best.

A job that is interesting and useful is only one of the major challenges you will meet as an adult.

As a member of our society you must be prepared to function wisely and effectively as a citizen, a father, and a member of many activities. This society of ours is a dynamic one and you will see many changes. Your education at Brooklyn Technical High School has been designed to develop your individual capacity to solve these new problems.

May I wish you the very best of luck.

Sudar (Americal)

Isidor Auerbach Principal

#### Administrative Assistants

Mr. Joseph Fannina

Mr. Frank Stewart

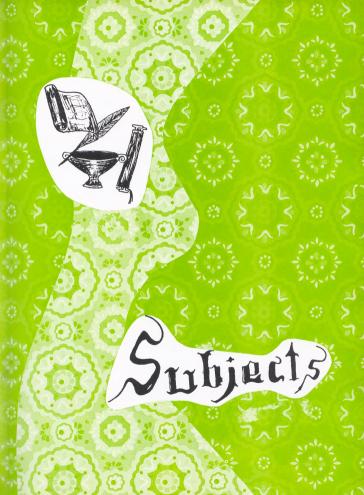

Mr. Joseph Lipp

#### Math

Dr. Barnett Rich, Chairman

From the zenith of ancient Hellenistic culture and the Renaissance, it flowed, From the mindsof Pythagoras, Euclid, and then da Vinci, it was derived. What is it? The language that expresses the laws of science that Newton used to explain the universe.

During the Renaistance came the printing press. Great advances in mathematics now became possible. In Italy, the great achievements were the solution of higher-degree equation. In France, Descartes united algebra and geometry in a "Cartesian" graph.

Today, in our classrooms, under the direction of Dr. Barnett Rich, mathematics is used to stimulate and develop a disciplined and logical mind.

"Looks simple, doesnt it?"

"I really don't understand it either."

"You looked ahead! 10 points off your paper!"

#### English

Shakespeare concerned himself with intense emotions and their effects upon mankind. His vivid portrayal of human pathos dramatized the new importance of the individual.

He explored depths of emotion in order to show the "latent nobidity" and worth of all men; he made the world realize that every person is unique. The "era of Will" was a testament to man's creative spirit.

The English courses offered at Tech encompass more than boringly austree grammar lessons and book reports. Like Shakespeare's
work, they are designed to help ach student ponder over his role
in the universe. Mr. Daniel Cahill, chairman of the English Department, encourages his staff fo help "Johnny" come alive with feeling
and sensitivity. Tech's English curriculum attemps to create a love
for beauty of expression and opportunities for self-expression.

In addition to the regular English classes, the department provides honor classes and advanced-placement programs for exceptional students.

"Do you agree with Dostoevsky? If so, why not?"

Mr. Daniel Cahill

"Forward, March!"

#### Chemistry

The dawning of the Renaissance marked the emergence of the true "scientific-minded" man. The old theories of alchemy were gradually disproved and finally refuted. Chemistry, still in its incipient stages, eventually gained acceptance as a bona fide science through the tedious accumulation of scientific data.

Today, as in the early days of the Renaissance, there are still fields of inquiry that have yet to explored in chemistry. Department, headed by Dr. Louis Weiss, attempts to teach oall Technites the essential concepts of chemistry, the basis for all future discoveries. Experimental courses are constantly modified to keep specialized students cognizant of advances in the field.

"Man, this stuff beats banana peels."

#### **Physics**

During the Renaissance, philosophers started to seek scientific laws governing the physical world. Their investigations into the phenomena of force, matter and energy laid the basis for our modern achievements in physics.

Physics today is one of the most important of all sciences. In laboratories throughout the world, physicists delve into the mysteries of nature to unearth the secrets of the universe.

Tech recognized the importance of physics to the modern scientist and engineer. Our students learn not only to master the accumulated knowledge of the past, but to think and reason according to the principles of the scientific method.

Thomas O'Hara

#### Industrial Processes

The Renaissance man manipulated a wide range of materials—from wood to the ferrous and non-ferrous metals used in his ships and buildings. A large work force had to be educated in the handling of these materials from their basic form to their final shape. The need for such a force has increased with advances in technology.

Tech's Industrial Processes Department, under the direction of Mr. Max Kohn, exposes students to the basic processes and materials of modern industry. The curriculum includes a study not only of traditional substances, such as ceramic materials, but also of contemporary ones, such as plastics.

Mr. Max Kohn

Discussions encompass in-depth studies and examinations of these materials' structures and ways in which these structures determine properties and hence uses. Attention is also given as to how these structures may be varied to increase the suitability of materials for commercial use.

Dr. Burnell Shafer

#### The Social Studies Department

The Renaissance, the rebirth of knowledge, was possible only after the rediscovery of classical civilization. Scholars of the Dark Ages largely disregarded the past, thereby limiting their cultural and scientific potential, but in the beginning of the fifteenth century, people began to realize what lay among ancient temples and manuscripts. Soon, when the trickle of knowledge became a deluge, there emerged from this crossing of the classic with the medieval—the Renaissance. First the humanist, led by Petrach and Ersamus, sought to elevate the downtrodden soul of man. Leonardo formulated plans for devices only recently put into practical use. Machiavelli, in The Prince, produced the first realistic discourse on relative government since Tacitus, In all aspects, the Renaissance elevated man's mind and spirit.

Just as the Renaissance turned to Ancient Greece and Ancient Rome for inspiration, we find strength and purpose in the heritage of the past. Social studies is the subject that lays the groundwork for good citizenship in a democracy. Through such a study, we get to know our fellow man, in the past and in the present, next door and around the world. It is only through an understanding and a recognition of the achievements of the past that a civilization can expect a future of prosperity and development.

#### The Music Department

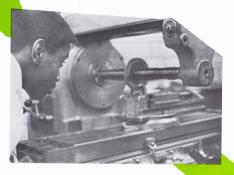

Music is a universal language. It's a symphonic representation of the likes, dislikes, fears and joys of the age it was written in.

The music of the Renaissance took bold new forms to express the people's feelings. The madrigal was born, which expressed the tender and gay feelings of the age. Operas and caratorics expressed all the people's feelings from the meekest to the strongest. The age is known by people such as Palestrina and Scarlatti and a host of other masical geniuses.

The Music Department of Brooklyn Tech is also brimming over with bold thinkers, fine musicians and talented instructors, such as its chairman Mr. H. Garter, Mr. C. Troxell, and Miss M. Silverstone. By acquainting our freshman with operas, symphonies and concertos, the Department simulates an appreciation for good music.

The Music Department also provides excellent opportunities for students with instrumental or vocal talent in either the Glee Club, the Dance Band, the Orchestra, or the concert band.

"And as our hero is being fed into the mill, we find . . ."

In the sixteenth century, a certain person named Leenardo da Vinci, among others, began writing about foundry practices. Aided by the printing press, he began telling everybody about the type of worker who was a patternaker mold-maker, blast furnace controller, and machinist all in one. People like him probably told of the great davanements, made in foundry, such as the concept that gates and risers would aid in the pouring of metals and the escape of asses.

Up until the 1700's, when the first actual complex machine, the steam engine, was invented, there was not much call for a separate profession of machining. The main function of machining in Renaissance days was polishing the castings.

Likewise, since castings were not complex, patterns were not. Many times a pattern consisted of merely a "strickle board," or template mounted on a pivot and used to clear out large pits, with loom and brick cores.

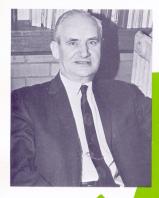

Tech's excellent foundry, pattern-making, and machining courses teach us the workings of this still very important industry.

"I'll get this bottle open if it is the last thing I do."

"I got my job through page four of The Survey."

Mr. David Weiss

#### Modern Languages

During the Middle Ages, the language of the church, and of the educated people was Latin. The common classes, however, developed their own languages. It was during the time of the Renaissance that these vernacular languages, as they were called, became accepted by all people, whether educated or not.

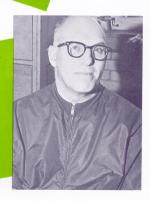

In our world, a knowledge of several tongues is essential. Since traveling to different parts of the world is an everyday occurrence for many people, the modern man must not be hampered by barriers of language.

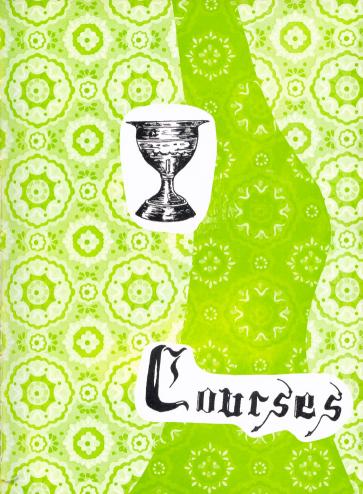

Here at Tech, the Language Department, under the direction of Mr. David Weiss, attempts to develop oral competency besides an ability to read French and German so that in the future the average Technite can parler his français or sprechen in Deutsch with filency and understanding.

#### Health Education

The Renaissance epitomized the well-rounded man, one agile in body as in mind.

Brooklyn Tech believes in this conception. Under the chairmanhip of Mr. Martin Lefkowitz, the Health Education department is given the responsibility for the continuation of this tradition. Through well-equipped symnasiums and classroom instruction in hygiene, the conscientiousness of their effort is ovident. Fitness holds the key that will unlock the vitality and spirit needed for our future leaders.

#### Aeronautical Course

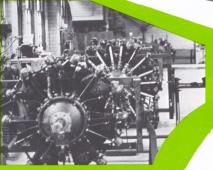

"We'll get your hand free yet - be patient!"

If the Renaissance was the rebirth of culture, it was also the resurrection of man's ageless desire to fly. Leonardo da Vincini, the foremost aeronautical engineer of his day, left behind a legacy of primitive sketches and written material depicting the unbelievably advanced ideas produced by his fertile mind. It is no great wonder that many aspiring pilots "flew" to early graves from high mountain peaks. It must be remembered, however, that these men worked with little prior knowledge and poor materials. Fear of ridicule forced them to work secretly.

Aeronautics, and Astronautics of course, is no longer a primitive area, but one of the most highly developed technologies of our times. We now have specialized schools, such as Brooklyn Tech, where a student, if he chooses, can get a basic education in the fundamentals of aeronautical and astronautical theory and aero aboratory. Such study will not specialize him for employment immediately after school, but will help make his work in an engineering college much easier.

"Is Snoopy ready yet?"

"The one in front had Platformate."

Ft. Greene Rehabilitation Center

"It looked easy when the teacher did it."

"Okay, so now that the window is up—where do we put the rest of the house?"

#### Architectural Course

The name Renaissance, as applied to architecture, means a revival of classical features and details, such as those exemplified by the Church of St. Spirito and Pitti Palace, both designed by Filippo Brunelleschi, the Florentine founder of Italian Renaissance architecture, Brunelleschi developed the free style of architecture, while, at the same time, reviving the use of Roman architecture. In the above-mentioned church its creator used many techniques of the Byzantine period, techniques unsule for the architecture of his time.

From Brunelleschi's era onward, the chief buildings of Italy were identified by the names of their designers; previously, in Italy, the architects had been anonymous.

Today, the Architecture and Building Construction Course at Brooklyn Tech helps students develop drafting techniques, planning and designing skills and the ability to use modern building construction materials. The course is intended to prepare students to create, design and construct practical as well as imaginative buildings.

#### Chemical Course

The scientist of the Renaissance was characterized by one outstanding quality—the courage to disagree with the scientific knowledge established by his predecessors. Such a man was Paracelsus, a renowned physician of the time. Shortly after being appointed to the position of Professor of Medicine at the University of Basel in Switzerland, he defided all precedents and began his lectures by burning the books of Galen, the supreme authority on medicine in the Middle Ages. His career in medicine was ruined, but he had the courage to challenge the established authorities and defend his beliefs.

Reputed as the discoverer of hydrogen, Paracelsus remains today a greaf man in the annals of scientific achievement. This valuable quality of searching for truth is instilled in the students of the Chemical Course under the direction of Dr. Louis Welss. Through an extensive pragram of classroom study and theory, coupled with actual laboratory work in the major areas of chemistry, the student can hope to attain the knowledge and skill necessary for entering the industrial field or pursuing further studies in college.

"Are you sure you know what you're doing?"

Our personal air pollution factory.

Dr. Louis Weiss

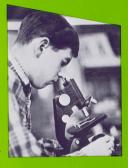

"The Treasury Department will never catch us."

"Hey, my drawing is beginning to look like yours, Jim."

#### College Prep Course

"Yeah, you're right - it's a hangnail."

The Renaissance marked the change from the parochial attitude of scholasticism to the liberal attitude of humanism. The men of the Renaissance did not circumscribe their views but searched for new ideas. Men began to question age-old truths. Copernicus was to ask, "Did the sun really revolve around the earth?" Galliec queried, "Did a large ball really fall faster than a small one?" Locke later asked, "Why do kings have the divine right to govern?"

The questioning of ancient concepts brought about the discovery of new truths and greater individual freedom. The Renaissance heralded an era of discovery and progress which extends up to the present.

The tradition of the Renaissance is being continued today in the College Prep Course. This course offers a wide variety of subjects that do not lead to premeture specialization and an insular attitude. The student is liberally exposed to both technical and academic disciplines. These disciplines of study help awaken in him a desire to search for truth; they make him a free man who is not a slave to preconceived notions.

<sup>&</sup>quot;No matter how hard I try, I still can't get WMCA!"

"What a Day for a Daydream."

The best engineers of the Renaissance were its best artists as well. In this role of industrial designer, Leonardo da Vinci is unmatched. Leonardo designed innumerable machines and weapons of war. He was also the painter of Mona Lisa, The Last Supper, and many other great masterpieces of art. His fervid interest in science led to his study of mechanics and biology too.

Art has changed a great deal since the Renaissance; in addition, the methods of developing artists have changed. Today's aspiring artist will rarely be found in a master's studic; he will get his training in schools. Tech's Industrial Design Department, under the direction of Mr. Herbert Rosand, is today's studio of the old masters. It is an excellent course for the development of an industrial designer who aspires to go directly into industry or plans to pursue a further education.

# Industrial Design Course

Mr. Herbert Rosand

"Drawing to scale."

# Mechanical Course

"I got it up to the speed of light, then — poof!"

Mr. John Krauss

"The Bic pen drills through anything."

The Renaissance, a time of intense intellectual stimulation, contributed greatly to the advancement of technical practices concerning machinery and its use in society. Leonardo da Vinci, the genius of the Renaissance, was able to perceive the vital role mechanical devices would have in future generations. He designed many intricate pieces of machinery, including a boring mill, a screw machine and a lathe with a three-bearing headstock. His main contribution was, however, less material in nature. Da Vinci was the stimulation for further research and invention. As a result, the field of technology was given a jolt which started it on its way to becoming the basis of all industry.

Technology has come a long way since the Renaissance. Today there is a great demand for men skilled in the production, use and maintenance of machinery. The mechanical course in Tech gives boys a solid background in all these areas.

Although graduates of the mechanical course are not considered craftsmen, they do acquire sufficient knowledge to make an effective entrance into industry.

# Structural Course

The Renaissance brought great beauty and art to the achitectural and construction techniques of its time. The passing of the ages has further promoted the marriage of esthetics and function. This union is only one of the phases stressed by the Structural Course in its instruction of civil engineering technology and construction. Through extensive training in structural metrials, surveying, structural design, and structural practice in the shops; the engineers, technicians, contractors, surveyors, draftsmen and steel designers of the futural are molded.

Mr. A. Amatulli, chairman of the Structural Department, administers some of the most extensive and comprehensive laboratories and shops to be found in the city, perhaps in the country.

Construction has come a long way since the Renaissance; now we are on the brink of social and technological upheaval, creating a demand for new structural ideas. The class of '67 is well-equipped to handle this challenge.

"Your pants will be ready in a moment."

Mr. Angel Amatulli

The little old bake shop way.

# Electrical Course

". . . It predicted I'd graduate with the rest. . . ."

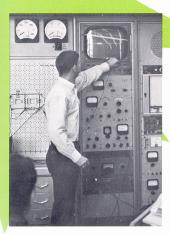

"That's not a U.F.O. — that's the antenna."

"And if too many calls come in .

Mr. James Quinn

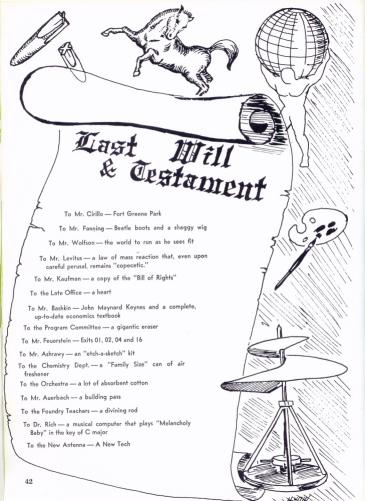

"It's Howdy Doody time."

Da Vinci's only observation of electricity was that if a piece of amber is rubbed with fur, it picks up bits of straw and other light-weight materials. Indeed, the ancient Greeks had made the same observation centuries before.

Today in Tech's laboratories, the boys of our Electrical Course perform basic experiments in the use of electricity of which Leonardo Da Vinci had no perception. The training received in this course is thought to be second to none in the country. The boys are taught basic skills that can qualify them to enter industry upon graduation, although most pursue further studies in college. Some of the basic principles which are emphasized relate to circuitry, electrochemistry, electric generators, and transformers. The student also learns how to use certain measuring devices such as the voltmeter, ammeter, wattmeter, and ohmmeter. In addition, there is the "electronics option" which contains two courses consisting of broadcasting and electronics. The electrical course leads the school in the use of computer programming.

It is safe to assume that to the future leaders in the field of electronics, Tech's Electrical Course will have contributed more than its share.

Activities

### Arista

A revival of interest in man and his arts was the distinguishing attribute of the Renaisance. Families set he Strozzi, Rucellai, and Medici patronized the arts and endowed them with their fortunes. The Medicis, for example, founded a Platonic Academy and aided the great philosophers Fictino and Pice. The Renaissance man was exemplified by the prigeos of the day, who served as the backbone for the flourithing age. A refined prince such as Lorenzo de Medici had interests in all fields such as music painting, archifecture, sculdure, etc.

Just as the Renaissance and its elite group of princes, so does Jech. Tech's Arista, the school's chapter of the National Honor Society, Perpresents this well-roundedness as much as it is possible in a technically oriented school. Its minimum average requirement of 87% and its requirement of 75 service credits spread over at least three terms makes Arista one of the most exclusive organizations in the school. Its members are easily recognized by their nationally known, distinctive blue and white pins. Under the direction of the faculty advisor, Mrs. Elaine Osterweil, and the officers, the organization sponsored dances with other schools and assisted at the administering of the Entrates Examplations to Tech.

Arista's Officers.

# Longfellows

Tech's Tallmen.

"Will suspect No. 3 step forward."

Renaissance diplomacy played an important part in the intrigues of government. Foremost among the diplomats were the Medicis, one of the greatest families of the Renaissance. Their ability to think quickly and find solutions to dynamic situations often saved the day for Italy.

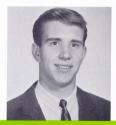

Tech also has its diplomats—the Long-

fellows, one of the most elite of the service squads. Because of their height of at least six feet and a minimum average of 84%, they represent Tech's "best image" at public functions. Under the leadership of President Mark Kay and Vice-President Greg MacGregor, they have ushereded at all Tech's social and athletic events this year.

# General Organization

Paul Masaracchio

President

Richard Stockton Vice President

G.O. Office Squad.

Government Reform Committee.

The Renaissance saw the rekindling of interest in man and the world around him. Nowhere was this drive more prevalent than in Venice, In this city of canals, characterized by an aristocratic republic, the major families of the city formed the Great Council, consisting of 480 men. Out of this number, 60 to 120 were chosen to make up the Senate, its legislative group. The Senate chose a Doge and six privy councilors to lead the government. This arrangement guided Venice to much presperity.

Tech's government is more representative than that of Renaissance Venice. Each year, the entire student body elects the president and vice-president of the school. Under this year's officers, President Paul Masarchio and Vice-President Richard Stockton, the General Organization sponsored all of the Tech's clubs, squads, and teams. Their appropriations enabled the teams of Tech to purchase all needed equipment, as well as provide funds to helps school-clubs, snrich the scientific and cultural life of Technites.

The G.O. also handles the complicated system which grants service credits to Tech's school-spirited citizens.

Peter Turza Secretary

47

# The Survey

The earliest newspaper that appeared with any degree of regularity was a sixteenth-century Venetian news bulletin. For the privilege of being able to see this posted bulletin, the townsmen paid a gazetta, a small coin. A corrupted form of the word gazetta became gazette, an English synonym for newspaper.

Tech's own gazette, The SURVEY, under the supervision of Mr. Nicholas Malachias kept students and teachers informed of all that was going on, in and around

the school. Always on top of the news on Page One were Takayuki Okamato and William Galperin. Presenting food for thought, in the way of editorials and features on Page Two, were Carmine DeSanto and Chris Hendrickson. The world of the athlete became known to the Technite through the pens of our sport scribes on Page Three, Owen Pickus and Mark Rosentraub. The jesters of Page Four. Manny Beigelmacher and Abraham Akselrad, held the newspaper together and kept everyone smiling. Scurrying about the building with their cameras, Elliot Kaplan and Joshua Socolof kept the pages of the paper filled with eve-arresting pictures. And riding herd on this band of wandering iournalists? Atilla Ilkson, Editor-In Chief.

### Science Bulletin

The inability to mass-produce books or periodicals caused the works of great Renaissance scientists to be overlooked for years: Galileo's works were first printed when he was on his deathbed; Da Vinci's notes were not even glanced at until years after his death. Thus, many potential students of the sciences during this period were denied access to works which might have given them greater incentives to study science.

The students at Tech have no such problems. The Science Bulletin has given us, and will continue to give others, insight into new and interesting developments in

the physical sciences. Its articles also broaden the scope of knowledge both for Technites who wish to plan a scientific career and for those who are merely curious. The Science Bulletin is a frequent winner of the Medalist Award, the highest granted by the Columbia Press Association.

### Horizons

The Renaissance saw the creation of men interested in both the tochnical and the cultural aspects of life. Da Vinci's genius filled many notebooks with scientific inventions, yet he also painted and wrote original poetry.

Many Toch students have traveled a similar road. Evidence of this fact is the school literary and art magazine, HORI-ZONS, It is interesting to note that in a school devoted primarily to the sciences and engineering, a magazine of intellectual awareness and sensitivity is able to thrive. Undoubtedly much of this success can be attributed to the faculty adviser, Mrs. Barbara McElligott and to capable editors, such as Edward Heinrich and Andrew Sckel, However, credit also bollongs for those students whose literary and artistic products mark them as the descendants of the great traditions of the Readisance.

### Math Student

During the Renaissance the study of mathematics was renewed after centuries of scientific neglect. The geometry and algebra of the ancient Egyptians and Greeks almost disappeared in the Dark Ages following the fall of the Roman Empire. Four men considered the most important in the revival of mathematics in Europe were Gaillee, Copernicus, Kepler, and Newton. The first these explained the nature of the universe by using mathematics. Newton concentrating on the physical laws of the world, was partially responsible for the development of calculus. Mathematicians such as these were chiefly responsible for our modern knowledge.

Today, it is likewise essential to inform the general public, as well as students and teachers, of innovations in mathematics. This goal is accomplished by meetings of the top mathematicians and scientists in the world and also by the publication of many mathematical journals.

At Tech, the Math Student works to acquaint the general student body with some of the more interesting aspects of mathematics. It accomplishes this by publishing articles, carbons, puzzles and problems which help the student to learn more about the vast field of mathematics.

This year, in its usual tradition, the Math Student was awarded a First Prize, the highest award of its class, by the Columbia Press Assoc. Contest.

Inspectors Frank Garibaldi and John Maguire

Stephen Foti Captain

# Service Squad

The Renaissance was a significant era in the history of civilization, It was a period of transition, from the barbarism and feudalism of the Middle Ages to humanism and intellectual growth.

Out of chaos, the Renaissance created order and stability. Feudal allegiances gave way to national political units; also, the orderly procedures of the scientific method revolutionized many fields in natural science. Thus, the stability and order that settled upon Europe during the Renaissance was largely responsible for the intellectual growth of the individual.

Similarly, order and stability are essential to creative thinking and scholarly achievement in Tech. The responsibility of maintaining order is entrusted to the Service Squad, the efficiency and dedication of whose members are unparalleled.

William Bianculli

### Football Team

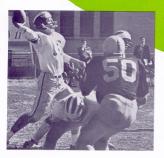

Cleaner than white, all the way to bright.

A Tech Football Team that averaged 25 points a game stormed its way to a 5-1 season. A team three years in the making, it boasted a defensive wall, "The Misfits," that held opposing squads to an average of 10 points.

At the sound of the opening kickoff, Tech knew they were winners. In the first game, a tremendeus offense slaughtered Midwood 42-0. The steamroller next crushed New Utrecht 38-22, Jefferson 22-6 and Erasmus 28-8. Then, being hampered by penalties and the tough defense of Tilden, the Engineers were stopped. Not willing to give up, they bounced back to beat Lincoln in the last official P.S.A.L. game of the season.

The Engineers' season was highlighted by nominations to the All-City Team of high-scoring Jim DeVita and Paul Masaracchio; for Paul, a return trip. Rounding out Tech's great offense were quarterback Richard McKay, fullback Howard Goldman, and end Bill Miller. Each of these boys received honorable mentions on this All-City Team.

Coach Adam Cirillo laid the groundwork for this highly successful football year.

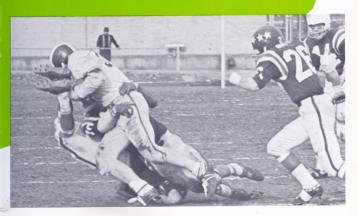

56

"Let me go; I have a floor pass."

"Boy, these cheerleaders are tough."

### Baseball Team

Tech's Baseball Team entered this season with the gleam of revenge in its eyes. Shortchanged by a loss to Grady in last year's Brooklyn playoffs, the Diamondmen, led by Captain Carlo Favale, sought that elusive City crown. Stalwarts returning were Co-Captains Stephen Sturman and William Johnson. Infielders Tony Mollica and Ben Herman vowed to play errorless ball as Gus Makris and Al Volpe roamed the outfield. The mound brigade headed-up by returning Vinnic Camuto hoped to pitch Coach Bernard Polan to another top season.

-

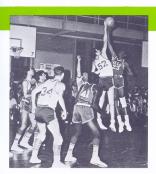

"I keep telling you, I can tie my own shoes!"

# 54

"Who's the wise guy who put glue on the ball?"

# Basketball Team

It is a tribute to Coach Sheldon Schnieder that in his first year he molded Tech's Basketball Team into one of the most threatening five-man combinations ever. Perhaps the biggest single factor in the Hoopsters' success was All-City Charles Davis, Charley broke every scoring record at Tech as well as becoming the first to total more than 1,000 points. Contributing to this great feat were his 30 point-or-better average and such performances as a 57-point game victimizing Erasmus. Leading a spirited defense was Jackson "Chief Thunderfoot" Collins, sixfoot-four-inch center, and William Staton. This duo helped to maintain board control while chipping in more than their share of points. Key senior reserves, including Ronald Wright, Glenn Montgomery, and newcomer John Karabelas, rounded out the team. Always in the background, yet assiduously aiding Coach Schneider and the Hoopsters, were the senior managers Alan Epstein, Gilford Vassar, Joseph Cohen, and Sheldon Fialkoff.

"There's something I want to tell you."

"It's our ball and we play by our rules."

### Soccer Team

Freshman coach, Mr. Robert Feger, has reasons to be proud of this year's booters, Coach Feger built a fine defense which allowed only four goals, while a brutal attack found the opposing net 23 times. After losing an opening day game, the Booters won seven straight and tied one. Led by Captain Reinhard Eisenzopf, Gus Karayianis, Robert Spance, and John Wexler, the 7-1-1 record was not good enough for a first-place finish. Although only number two in the Borough, Coach Feger and all of Tech were proud of the '66-'67 soccer team.

In his freshman year as coach of the golf team, Mr. Mark Greenspan kept the winning streak of retiring Jack Balsam alive. Compiling an undefeated record in Brooklyn's Central division in 1966, the new helmsman expected the Dutchmen of Erasmus to be the only obstacle to a division crown, Mr. Greenspan relied on Captain Steve Regli for another great season. Seniors Phil Brandon, Robert Gerstl, and Phil Hoffman were counted on to pave the way to a possible showdown with Tottenville-number one team in the metropolitan area.

Soccer to me, Baby.

"Let us out of this cage."

"What a way to drink soup!"

Under the direction of young, vibrant, Coach Thomas Ross, the Mermen added to the great record that they had inherited. Captain John Munk, All-City Butterflier, led Tech's All-City entrants: Co-Captain Dave Mignamo, in the backstroke, Co-Captain Eric Kaiser, in the breaststroke, and Co-Capt. Steven Zimmerman in medley relay. Always welcome at meets were the points contributed by Co-Captain Allan Drusys' sprints. Filling out the spectacular array of human fish were 200-man Tom Burns and Elliot Wiesner in the 400 vd. freestyle.

The Mermen, numbering 29, continued the unprecedented record of never losing a division meet in 180 tries. This is the twelfth consecutive year the Natators added some gold to Tech's hall of trophies.

# Swimming Team

Tech's Mermen.

Rifle Team

"We fight for the right to be free."

The rifle team ricocheted from many casulties at last year's graduation by shooting up Division I. The coach of the "Nimrods", Mr. J. Trummer, averred that this year's rendition was "one of the finest teams I have seen." Bulls-eye after bulls-eye put the 196-6 Rifle Team on its way to its fifth straight City Championship, Returning shots from last year, Capt. Burton Weiner and Capt. "Big John" Snyder attributed a stronger team to the addition of sharpshooters John Stigi, Steve Jones, Hall Katz, Ray Schauer, and Mike Jassick. Backing up this keen-eyed team were J. Y. members Robert Amatore. Jeff Baldal.

James Chu, Ken Kaplan, Ed Memmen, Fred Reincke, Stuart Roth, John Ruggrero, and Eugene Siegel. The team took pride in having added yet another trophy to Tech's already enormous collection.

Last year only Clyde and Guiseppe smoked L&M.

"My kingdom for a horse."

# Gymnastics 9

The Gymnastics Team, litt hard by last year's graduation, rebuilt itself into one of Brooklyn's pewerbauses. Aided by the new head coach, Mr. Sy Zaglin, the gymnasts worked hard and long before vaulting into competition. Cantain Vinny Russo and Co-Captain Bill Hollinsde led the returning sensing a second straight title. Other returning members of the class of '67 were Joe Cerami, Wellington Yee, Andy Frankl and Frank Goldsmith. Allways in the background, yet always indispensable were the student managers, Josh Socolof supervising the staff of Leonard Athebet and Ed Davis.

# Cross Country

and

# Track Teams

"What, there's only one jar of Cocoa Marsh left?"

The Cross Country Team of 1966-67 was one of the most powerful in the history of Tech. The Harriers won the Brooklyn Dual Meet Crown before being edged out by a mere four points in the City Championship. Seniors contributed heavily to the success of this year's squad. Captain Louis Adolfsen, Richard Corcoran, Al Ugelow, and Mike Dalton were the hub of the varsity, while John Clendenin and Alan Olsen were leading the JV. to a City Cham-

The seniors who also comprised the core of the indoor and outdoor track teams were Hayes (A.m.e.s. 1000-yer Champion; Rich Corcoran; sprinfers: Larry Seyda, Sidney Nowal, Phil Legnetti, Joel Lucas, Cherlie Swanson, Chuck Thompson and Bob Reichelman; halfmiler Jerry Weder; two milers: Mike Dalton, Al Ugelow and Alan Olson.

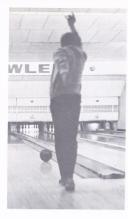

"Do you want shashlik or kabob?"

# Fencing Team

Tech's fabulous fencing team finished on top of the division for the seventh time in eight year. The foilers captured second place in the city, losing only to arch nemesis Stuyvesant in a sudden-death playoff, 8-7. Leading the Tech six were seniors Captain Joseph Hermes, Gary Israel, Bob Milazzo, Henry Mentle, and Co-captain Joseph Sofield. Managers on the team were Jeff Schwartz and Mark Teitlebaum. Freshman coach for the 1966 squad was Mr. Nathan Chesler.

"R-R-R-Rip"

# **Bowling Team**

This year's Bowling Team, coached by Mr. Martin Lefkowitz, having been spared by a light hit at last year's graduation, came back to strike in 1966.

In September, came the dirtiest and hardest work of all—picking the starting eight. When the process of selection-had been completed, the Sentiers finding starting berths were Captain Mel Schmidt, Dave Plisco, Jose Major, Nick Todaro, Al Volpe, Dave Keytler, Richie Berger and Fredd Sentials and Senting team were second-string Seto Jaw, Mark Lesser, and Donald Loung.

A team average of 178 was good enough to pin 5 division foes twice, with Bushwick earning the only split. The 11-1 record gave the Keglers a well-earned 1966 Division Championship.

# Tennis Team

Under Coach Victor Onoato, the Tech Tennis Team readied itself to face the opposition. This year the racketmen found themselves wellmanned with five two-year veterans. The senior "Racketeers" included Captain Bill Galperin, a singles star, and the successful doubles team of Steve Wall and Mike Morton, Competition was keen from arch-rival Midwood but Madison's courtmen were easier to conquer because of graduation losses. Coach Onarato held many practices with the very promising team in the hope of returning the Brooklyn title to Tech for the first time in six years.

# Handball

The Tech Handball Team looked forward to slapping its way into another great season. Led by Head Coach George McDonough, the Handball Team hoped to better last season's 8-2 wonlost record. Arch-rival Jef-

ferson was predicted to offer the sternest competition in a league featuring all the Brooklyn powerhouses. Seniors who helped the Handa ball Team crush such oppenents as Eastern District were James Whittam and John Pellegrino.

Seniars

Pasquale Macri Vice President

Mr. Martin Kanin Senior Class Advisor

Richard French President

### Fellow Seniors:

Now that we are graduating from Tech and starting on our chosen endeavors, we seem compelled to look back on the years we spent here. These four years marked a time of learning and maturing: We entered as boys and now we are leaving as men, men that have faced the challenge of four years of hard work. This wasn't a physical labor but a toil of the mind. Some who started with us have left, but those of us who remained have firmly resolved to reach our goals. The diploma that we will receive at graduation is not just a piece of paper but a symbol of the culmination of hard work and study. Our efforts to improve ourselves must not end here but must continue in the treadition that makes Tech great.

I would like to-congratulate all my fellow seniors on their graduation and wish them all the luck in the future.

Sincerely.

Rechard French

Richard A. French

Steven Sturman Treasurer

Leonard Gillespie Secretary

# History of Events

### 1963-1964

September of 1963 marked our entrance into Tech and the beginning of the end of the "Old Tech." Mr. William Pabst declared his intentions to retire. The "new look" included a history teacher, Miss Cincotta, and the halls were never the same. The "Old Tech" also won a football championship and its first basketledgame in two years, while the Most clinched last place, again. The S.O.S. elected new leaders and the G.O. changed the service credit system. Mr. Joseph Fanning was the Survey's "Man of the Hour."

Tech was not the only institution to experience a change of leadership that year A tenseless killing in Dallas, Texas, gere Lyndon Johnson the torch to carry which John Kennedy had lit. Mr. Pabst made the grim announcement during the eighth period of the school day. "The President died at Parklands Hospital from a gunshot wound in the head."

unshot wound in the head."

The words had not yet penetrated when Technics were diminised that afternoon, only to meet people crying in the streets and subways. The awareness of flags lyying at half-mast seemed mournfully to confirm the new that one of our own was with us no longer. The closing of school for the President's funeral was perhaps the first time the engineers would have preferred the subways and buses to the living room television they.

But some gladness remained in the air when the limited Nuclear Test Ban Treaty was signed. The future engineers in Tech felt somewhat relieved that they might not have to go into the defense industry.

### 1964-1965

Well, we were sophomores; yet many of us remained as gullible as freshmen.

The Survey reported, on Page Four, "Tech To Become All Girls," and even indiecated that three females had already invaded the school. When word spread quickly
that witnesses had actually seen them, organized chaos occurred.

Mr. Pabst was officially thanked for his forty-two years of service to Tech; Mr. Stewart became acting principal.

The sports pages were filled with the money battle between the professional football leagues. Sonny "as in Money" Werblin took the honors when he paid \$4.0 x 105 (\$400,000) for a trick knee. The Yankees played in the World Series (their last, for a while?) and the Mets finished tenth.

As fourth termers we were given the rare opportunity of being Technites during the publication of a revised edition of the bible, the Tech Handbook. The S.O.S. made headlines when they elected some new leaders while we learned that happiness in art appreciation is getting 100% on one's notebook.

One more thing happened which was given little publicity. The Freight Elevator's cables snapped while the car was on the fifth floor; it took twenty-two minutes for the car to fall to the basement. Fortunately no one was hurt.

### 1965-1966

The Junior year! This was the year that Technites were blessed with the Experimental Physics Regents Course. Many of us still contend that the 'experiment' was a failure.

Alumni rallied to the support of these schools and opposite pressures were put on the Board of Education. Tech, for the time being, was saved.

Well, it fired on stanot happins. That your also saw the disruption of Tech's present changing, the Transit Authority. A noisy man gave some robed indeed fittle personal advice and almost paralyzed New York City. Technites attended local high schools, saw how the other half lived and realized that "co-education" at a dirty word. To the dismay of Technites, final exams (including physics) were concelled.

A sign of the times' appeared in the Survey. An advertisement read, "Know Where You Stand: The Draft and You." Perhaps they were trying to tell us some-thing

The Gym team won its first City Crown, while the Football team upset Jefferson. The Yanks finished sixth, as the Mets finished tenth. The Students beat the Teachers in the annual student-faculty basketball game, and the S.O.S. elected some new leaders.

1966-1967

Seniors, at last! It was a hard grind and even more disturbing when we were informed that many colleges required Mid-Year Reports. Well, back to work for

During our seventh term, Mr. Isidor Auerbach became the new tenant of the Principal's Office. Mayor John Lindsuy made a personal appearance at Tech to help install the new principal and the Technites behaved admirably at the assembly. Upon leaving, the Mayor told us something we already knew: "Tech is just great."

Change had come to Tech. One of Mr. Auerbach's first acts consisted of summoning the student leaders to his office, asking their opinions on the Tech curriculum and other related topics. Innovation was in the air.

tum and other retained topics, Innovation with the arrived at Tech. It was capable of doing almost anything; therefore, no one in Tech could decide on useful employment for it. It had very pretty dials and lights, though.

Of course, the greatest day of ony senior year was the one in which a new antenna was raised and the old razed antenna lowered away. The new structure are fresh the tallest building in Brooklyn. Mr. E. Kalm of the Social Studies Department summed up everyone's feelings when he declared, on a windy day, "Well, if it doesn't fall down-they put it up right."

Administrative Assistants Marcus Mayer and Joseph Fanning taking leaves of absence, were replaced by Mr. Joseph Lipp, former chairman of the Program Committee, and Mr. Frank Stewart. "Looks like those detention slips won't catch up to us now," was the reasoning of all the well-disciplined Technites.

In the "Where Are They Now" department, a Tech grad became an astronaut, which a basketball player, Charlie Davis, finished twenty-four points shy of the all-time city personal scoring record. A great football team felt wo fumbles short of the City Crown, and the basketball team had a winning record. The S.O.S. elected new leaders and the prices of lanches in the cafeteria rose to new heights. To poison one's friend cost 37%

The sports world noticed some changes too. The Mets were not last, the Yanks were. The football Giants gave up a record 501 points, (72 in a single game) and the pro leagues merged. A little sports news made everyone sad. Arthritis forced Sandy Konfax to call it a career after only four no-hitters.

The New York World Journal Tribune finally appeared; the conflict in Viet Nam was now being called a "war", and the Central Intelligence Agency announced

that it had been giving subsidies to collegiate organizations since-way-back-when. Technites grieved at the news of the death of the crew of Appollo I, while the war

look back with fond memories.

hit home with the deaths of several alumni serving in Viet Nam.

Yet with all that happened throughout our four-year stay at Tech, we did
manage to survive and leave just enough of the building standing for the classes
of the future. We have enjoyed the time at 29 Fort Greene Place and will always

No matter what, the sight of the blue and white Tech jacket will probably bring a smile to us for many years to come. What happens now as we each go our separate ways, only time and our draft boards can tell.

Abe Akselrad Mark Rosentraub

JOHN YAMAGUCHI

## Voices From the Past

". . . and in the space provided, name your probable choice of career after graduation. You may only use the special pencils provided to you by the proctors. . . ."

". . . but son, if you go to Tech, every college will beg you to attend their school."

"Look to your left and look to your right-one of you won't graduate."

". . . and copy this program from the blackboard-no, Fdy 152-54 is not Frieda da Yenta, It means Foundry, . . .

"Fill out these Delaney cards only in the prescribed manner which I will explain to you carefully. Where it says 'name' put your name, where it says 'teacher's name' put your teacher's name, where it says 'telephone number' put in your tele . . ."

"Lemmee see your transportation card, fellah!"

"Here Jack, get me two peanut butter and jelly sandwiches, a milk and a pack of cookies. I'll carry your books up and meet you at the table.' "Your history term paper is due the day you return." "Well, there goes Easter

vacation!"

"The Importance Of Safety In The Home As Well As In The Shop."

"Psst! Want to buy an elevator pass cheap?"

"The Bessemer furnace, glass refinement processes and the manufacture of toothpicks in Pakistan will be worth forty points on the final."

"Our first job this term is the Step-V-Block, which you will find serves many useful functions."

"This is not a football—draw it like an ellipse!"

"I would like to exempt everyone from the final but I'm allowed only three exemptions per class."

"Man, is this veography class a dray!"

"Lemmee see your transportation pass, fellah!"

"Man, did you ever notice how fast that term vacation went?"

"This is not a jigsaw puzzle. It is an orthographic pro . . ." "How many in this class really liked that last recording played of Pictures at

an Exhibition? Come on, be honest now . . . is my secretary noting the names?" "Boy is this Miss Survey a dog!"

"Lemmee see your library card, fellah!"

". . . and in order to get a ten on the trampoline you must be able to open the trampoline up from a closed position, wheel it in place and sing 'Tech Alma Mater' while bouncing with your big toe caught in one of the holes. . . ."

"Boys, take an old teacher's advice; don't waste your whole summer vacation. Do a little studying each day-about two or three hours of each . . . "

"Man, did you ever notice how fast summer vacation went?"

"... and what a joke hygiene is ... ."

". . . and don't make your art notebooks too fancy-a couple of ribbons and a Rembrandt original should do it, Remember, notebooks are secondary and an appreciation of art is the function of this course."

"Fill out and return these cards tomorrow if you are interested in taking the three-year college prepara . . ."

". . . and the basic function of this course is to give you an appreciation of machines, tools and the destruction they are capable of. Your first job will be a steel Step-V-Block, which you will find serves many useful functions,"

"Boy, is this world history class a drag!"

"Lemmee see your absence note, fellah!"

"No, I don't spreckin zee French!"

". . . say, did you see all the equipment and that airplane in the aeronautical shop. That course conference was really something,"

"Wow did this year go fast, I hear that next year is better because with classes like physics, the pressure is off us,"

"Man, did summer vacation go fast."

"Boys, this morning's assembly is brought to you by the makers of the Tech Special,"

"I hope that all of you realize that this is the time to begin considering which colleges you are applying for. The University of Shmoodsmer, for example, takes Technites without hesitation, provided they have a sixty-five average."

"Did you see what's-his-name Al vibrating along with that tuning fork in physics this morning?"

"Your stay in study hall should be a most rewarding one. We have certain rules which must be obeyed or else. No reading, writing or meditating allowed and passes will be restricted to a limited number of studen . . ."

"I'd rather not discuss my S.A.T. scores at this moment."

"Finals done and only one more term to go."

"Man, these assemblies get dumber and dumber every term."

"I don't care if you are a senior, you don't call the Administrative Assistant 'Man.'"

"Oh, well, who wanted to go to Columbia anyway? !!"

"Another dance with Bay Ridge? Won't these guys ever give up?"

"... and another thing, senior or not, you're going to start coming in at 8:50 and attending prefect, or else!"

"This Senior Day's a gas."
"Lemmee see your transportation card, fellah!" "Zonk! . . . Zap! . . . Pow! . . ."

"Oh boy, only another twelve days to graduation and then freedom."

"Hev. did you sign my yearbook?"

"Just English left and that's it!" "Wow."

"... and remember your alma mater, and always respect it."

"Hey Frank, we've finally made the Big Time. We've graduated!"

"Lemme see your diploma, fellah!"

"Hey, I'm making a Step-V-Block in structural shop. It's great for . . ."

"All I know is that there were a lot of sparks and Vinny and his circuit breaker disappeared in a cloud of smoke."

"Good morning. This is the news of coming events at Tech. Your announcers are Chet Huntley of G-12 and David Brinkley of F-11."

"Yeah, but this is supposed to be the last term that Poly counts. Next year, I don't give a . . ."

"Oh, my gosh, I've got a meeting of Math Help this afternoon and I don't even know what year math I'm taking."

"Fill out these invitations to your final examinations in the following special manner. Where it calls for your name, put in your name. Where it calls for manner put in my name. Where it calls for class put in the class. Where it . . ."

"How do you like my new senior ring? Does it make me look any older?"

"I don't know about you but that Physics Regents might just as well have been written in Pig Latin 'cause it couldn't have been any harder to understand."

"Yahoo! Finished for this year. I can't wait 'till I get to use the Senior entrance next term."
"Well, here we are again but now I'm a senior. I ain't takin' nuttin from

"Well, here we are again but now I'm a senior. I ain't takin' nuttin from nobody, especially from da S.O.S. I'll kill the first squadman dat asks me for a pass."

"Welcome to Print Shop. The first job we will print this term is an engraving of a step-v-block. This is a tool which many of you will find useful when . . ."

"Well, it's like this. Stony Brooke wants a three million word essay while Harvard and Kingsborough Community want only a half-million."

". . . and there's some guy running around the halls with a class rank of number 1,321 out of a class of 1,322 and he claims, 'We're only Number 2.'"

"All my applications went in last week and now the S.O.S. can't touch me."

"What do you mean they sent you back your P.C.S.?"

"Lemme see your senior button, fellah!"

"Boy, would I like to forget that Regents Scholarship test. Could you do any of the biology or music?"

# The Longfellows

Note the Longfellows participating in one of their usual functions—a Christmas Party. Our beloved president, sitting at the head of the table, is giving one of his philosophical (Stoic) discussions. The rest of the Longfellows, however, are Epicurean in their ways.

### THE LINCOLN SAVINGS BANK

FOUNDED 1866

MICHAEL J. BURKE PRESIDENT BROADWAY AND BOERUM STREET BROOKLYN, NEW YORK 11206

Dear Graduate:

Graduation is a most important time in any family's life. A time to reflect about the many good things that have happened in the last four years ... and a time to think about the years ahead.

I am certain that you have considered furthering your education, either in college or in the many fine trade or nursing schools which are available. Perhaps you have already made a decision ... we hope it was to continue your education.

### Now here's how we can help!

Under a cooperative arrangement with the New York Higher Education Assistance Corporation you may borrow from \$750. to \$1,500. a year with a maximum of \$7,500. for attending college ... lesser amounts for trade schools. You make no payments and there are no interest charges while you are in school. Upon termination of studies you can take up to six years to repay. Loans are made directly to the student ... no co-signers are needed. Dial the telephone numbers listed below for additional information.

May we take this occasion to congratulate you on your graduation and to wish you a successful and rewarding future.

Cordially,

New York City - Area Code 212 782-6000 Nassau County - Area Code 516 931-4300
